	/	8
		3

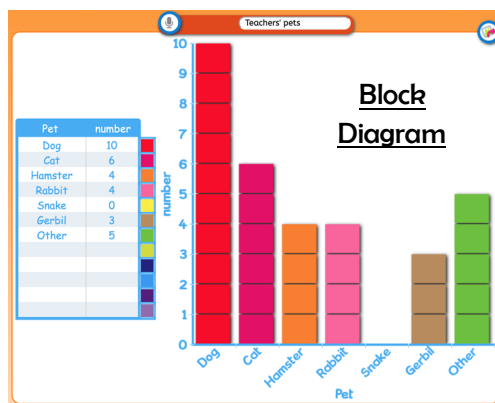

Tally Charts are useful when counting and comparing objects. They help us to organise and then count more easily. Your five times table will help you to count tallies.

Before sharing data, remember that:

- It isn't OK to share personal data about someone else without their permission
- It isn't OK to share personal data with strangers
- It is always OK to say no!

Presenting DataPictogram

Pictograms and block diagrams can be used to help us to present data. Computers help us to lay out the data so it is evenly spaced, and easy to read and understand.

**Key Vocabulary**

attribute

A property of an object. For example, its colour, shape, or size.

data

Information collected for use

organise

To arrange things so that they can be used or understood easily

pictogram

A chart that uses pictures to display data.

tally

When you make a tally chart you make groups of five.
